Increase YourSkills

PHISHING ATTACK SIMULATOR

Train your employees effectively & sustainably

ABOUT IYS
Full-Service Awareness – Everything from a Single Source

Since our founding in 2017, we have emerged as one of the most important players in the security awareness market, and have been recognised by kununu, the German employer ratings platform, with their Top Company Award. Never wanting to rest on our laurels, we are constantly developing the best products to sustainably improve our clients' security level. Thanks to our full-service awareness platform, we can train companies and their employees on how to prevent, recognise and respond to cyberattacks. The essential building blocks of information security and data protection are conveyed to clients through our fresh, engaging and interactive awareness training. Additional support is included through our realistic phishing simulations, which help clients put their knowledge to test in a safe and protected environment. Our commitment to delivering the best quality was recognised with the "Cybersecurity Made In Europe" certificate in 2021, and a year later our innovative product, KOMM-STARTER®, took home 1st place at the Sächsischer Digitalpreis awards ceremony.

PHISHING ATTACK SIMULATOR
Analyse your company's weak points

Our Phishing Attack Simulator (PAS) offers users the ability to create various customised attack scenarios or use existing industry-specific scenarios from our library. The Phishing Attack Simulator allows you to visualise your employees' resistance to phishing attacks at the team level, conducted in a safe and controlled environment. Our reporting tool evaluates the data and provides information on the current level of security awareness using our benchmarking system. In doing so, you not only highlight the weak points within your company but also help to protect sensitive company data in the long term.

FULL-SERVICE AWARENESS

Create a strong security culture with us

Training · Assessment · Attack Simulation · Reporting

The majority of all cyberattacks no longer serve to exploit technical vulnerabilities but instead, start at the weakest link in the information security chain – the human being. Within the topic of awareness, is it important to continuously train and sensitise, to remain competitive in the long term.
